

WESTERN ENGINEERING

Consultants *A Small Company Doing Big Things*

When Chad Cox founded Western Engineering Consultants in the basement of his home in 2003 even he couldn't imagine the success and growth his company would enjoy.

Just 5 years later Western Engineering employs 12 highly skilled professionals including four professional engineers and a certified landscape architect. Within the first fourteen months, the company moved from the basement of Cox's home to much larger quarters at 20 S. Fifth Avenue, near Brighton City Hall.

Unlike large engineering companies that might spread their projects among different departments in various locations, or sub contract work to other firms all of Western's work is done – in house. At Western there is only one department, the entire company.

Cox learned early on that as a small company Western could provide dedicated service that was more personalized and cost effective. Western Engineering has built solid relationships with smaller specialized firms such as land surveyors and structural engineers that enables them to provide real genuine care, quality and costs to the clients Western represents.

Today most governmental agencies have a set of stringent requirements and regulations that must be met when a project is designed and presented for review and approval. These regulations are in place to insure that each project brings value to their communities. Western's high standards and understanding of these regulations allows them to prepare a project right up front thus eliminating many of the hassles

and potential time losses any project might suffer.

Western's projects can be found in nearly every Front Range community from Castle Rock to Longmont to Brush. They also have projects in Arizona and New Mexico.

At Western Engineering there has been no project too large or too small. Western is putting final touches on a several projects at Centennial Airport including a 45,000 square foot hangar and office space facility. They recently completed the work on the Gateway Center on Fourth Avenue near Bromley Lane. They have also completed work on the St. Augustine Church, the Brighton Seventh-day Adventist's congregation and the Brighton Animal Clinic. This past year they engineered 36 salt sheds for CDOT.

Cox, who now resides in Brighton with his wife and three children, has brought his professionalism to bear for his clients and his dedication to work for a better community. He and his family enjoy being part of the small town atmosphere found in Brighton.

Western Engineering has assembled a big firm staff into a small firm operation where every client receives the professional dedicated service they deserve.

You can contact Western Engineering Consultants, Inc. at 720-685-9951. They are at 20 S. Fifth Ave., Suite C, Brighton. You can also find more information about Western Engineering at www.westerneci.com.
