Western Engineering Consultants opens in Brighton

Brighton resident Chad Cox recently opened Western Engineering Consultants, Inc., 1196 Bluebell Way, Brighton.

The company will specialize in civil engineering consulting services, including the preparation of designs for utilities, grading, drainage, roadways, septic and other civil engineering improvements.

"We typically help clients achieve their goals for constructing projects in a high-quality and cost- and time-efficient manner," Cox said.

The company can also assist in planning and preparation of construction documents necessary to gain required approvals with state, county and city review agencies.

Cox is a Colorado native who grew up in Brush. His family lived in Brighton from 1996 to 1998 and moved back in March 2003. He has opened the business with Leland Askeland — another Colorado native. They have worked together for the past seven years.

Cox received his civil engineering degree from the Colorado School of Mines in 1993 and worked for 10 years for a Front Range engineering firm. He became a licensed engineer in 1998.

Cox said he is excited about beginning his business in Brighton.

"This area will continue to become a focal point of incoming business and positive growth that I look forward to being a part of," he said, "especially since this is where we've chosen to raise our two children."

He said that Western Engineering looks forward to "employing local engineers and technicians sharing pride in our community."

Cox believes that customer service is essential to the success of any business.

"It's true in every business — you are only as successful as your last customer," he said. "In our business we are only as successful as every client. Our business is driven by word of mouth and repeat performance."
